DD Form 2977 — Deliberate Risk Assessment Worksheet

Submission v2 (1 MAY 26 — BG Cox feedback incorporated). Preparer (1LT Aaron Overton) re-signed 1 May 2026; S3 (LTC John Sheaf), DCG-O (BG Cox), and RGT CO (COL Roark) signatures pending.

Adjustments per BG Cox 1 MAY 26 1551R email reply (CC: LTC Estes, COL Roark, CSM Seals, LTC Smith):

1. **Hazard #4 (SECFOR outdoor duty)** now publishes a forecast WBGT / heat-index and a recommended work-rest cycle keyed to TB MED 507 / FM 7-22 — see Hazard #4 row and the Heat Risk supplement immediately below the hazard table.
2. **Block 4 (Medical readiness, Hazard #10)** now carries an **individual deployment plan per Soldier** — specific limitations and risks per SM, controlled-environment mitigation per SM, no generic "one-fits-all" boilerplate. Per BG Cox guidance, **MRC-4 personnel default to MRC-3 treatment** (limited participation in controlled environments only); the same default applies to MRC-unknown.

Download (.docx): DD 2977 — TNMAN 26 (1 MAY 26 submission) — landscape-formatted worksheet matching the Funnel Fury 2026 submission format. *DOCX is the original 1 MAY 26 v1 submission; v2 narrative below supersedes it pending re-render.*

Source content below is the authoritative narrative; the DOCX will be re-rendered to match.

Block 1 — Mission / Task Description

Organization: 3rd Regiment (Alvin C. York), Tennessee State Guard

Mission / Task: SECFOR operations, sUAS reconnaissance, Incident Command Post (ICP) support, and communications support in support of TNMAN-26 "Simulated Kinetic Attack" — operation named **Mt. Carmel Site Defense**. 3 RGT, TNSG participates in the Tennessee Maneuver Exercise 2026 (TNMAN-26) — Simulated Kinetic Attack on Holston Army Ammunition Plant (HAAP) — conducting these tasks across multiple locations in East TN, 13-15 MAY 26, IOT increase MET proficiency and sustain collective and staff training proficiency at the Regimental level.

References: RGT OPORD 26-05-01 (Final, 141600RAPR26) · FRAGO 26-05-01.1 (212130RAPR26) · FRAGO 26-05-01.2 (302130RAPR26) · DIV OPORD 26-05 (161200RAPRIL2026) · JFHQ-TN FRAGORD 3 · RGT WARNO 26-05-01 · CG's Intent · Encl A Storyboard

Standing Mission Constraints (from CG and HAAP)

- **Dawn-to-dusk duty day** — Per CG direction, TNSG participation in TNMAN 26 is limited to daylight hours. No overnight assembly at the ICP.
- **RON at home or hotel** — Soldiers participating on more than one day must return home (or to a hotel of their choosing) overnight between duty days. *Narrow carve-out:* JFHQ-TN FRAGORD 3 tasks 278th ACR to provide **50-PAX RON space at Mt Carmel Armory 11-17 MAY** — this covers **1 RGT OPFOR and TNARNG Security / COMMS personnel**, not a TNSG-wide RON authorization. CG dawn-to-dusk policy still governs TNSG personnel unless separately extended by the CG.
- **Perimeter-only operations at HAAP** — No TNSG personnel are authorized to enter the HAAP premises. All 3 RGT operations occur on the outside perimeter only. The ICP is sited outside the HAAP perimeter. This excludes the interior explosive and industrial hazard set from the risk picture below.
- **Physical SECFOR footprint (HAAP POC, 20 APR — quantified 23 APR)** — SECFOR physical presence is limited to **outside the perimeter fence, parallel to the southernmost side of US 11W** only. Interior N/S/W patrols and screens are **notional (tabletop) only**. The 23 APR TPFDD quantifies the split: **54 Actual PAX on-ground at 14 MAY peak** vs. **70 Notional (tabletop) PAX**; combined Total 124 is retained for sizing/RFF purposes. Medical / hydration / bathroom / parking / chow / transport planning sizes to 54, not 124.

- **Unarmed force** — TNSG is unarmed by default; no Soldiers carry weapons for this mission.
- These constraints apply to all ranks and are baseline controls on every hazard.

Block 2 — Administrative

Field	Value
Organization	3rd Regiment (Alvin C. York), Tennessee State Guard
Activity Date(s)	**13-15 MAY 2026** (3 RGT Phase II 12-14 MAY; Phase III initial actions NLT 15 MAY 2131R)
Activity Location(s)	**ICP/RSA:** Armed Forces Reserve Center, 399 A US-11W Scenic, Mt Carmel, TN 37645. **SECFOR AO:** HAAP perimeter (outside fence), 4509 W Stone Dr, Kingsport, TN 37660
Prepared by	1LT Aaron L. Overton III, ASST S3, 3 RGT TNSG
Date prepared	25 APR 26 (revised from 11 APR original; submission version 1 MAY 26)

Risk levels reference: LOW = acceptable · MODERATE = requires mitigation · HIGH = requires senior leader approval · EXTREMELY HIGH = requires GO/FO approval.

Block 3 — Hazards and Controls

See the full hazard register at Risk Assessment. Summary table below — sequence and Implementer column match the 1 MAY 26 DD 2977 submission.

#	Hazard	Initial	Controls / Mitigations	Implementer (How to Implement / Who)	Residual
1	**Severe weather / flooding** — scenario + real-world. Slip/fall, lightning, vehicle accident, exposure; real weather may compound the scenario.	H	NWS monitoring daily; suspend outdoor tasks for lightning within 10 mi · rain gear issued; Safety Officer has stop-work authority · shift to ICP-interior tasks if weather red · **3 RGT authorized to call off participation entirely for forecast severe weather** ("don't go" is a valid control for a training exercise)	S3 monitors weather with Safety Officer. CDR holds call-off authority. BN CDRs brief stop-work procedures. (**S3 / Safety Officer / CDR**)	L
2	**HAAP perimeter-adjacency hazards** — industrial-area adjacency, perimeter vehicle traffic, low-probability hazmat-release exposure. *Interior explosive / industrial hazards are EXCLUDED by the no-entry constraint.*	M	Perimeter-only constraint — no TNSG enters HAAP premises · HAAP POC (Mr. Tony Armstrong) perimeter orientation pre-mission · pre-briefed perimeter route and emergency pull-back points · HAAP safety-officer liaison per work area · HAAP real-event notification protocol	S3 coordinates orientation with HAAP POC. HAAP LNO at ICP monitors for real-event notifications. (**S3 / HAAP LNO**)	L
3	**Convoy operations / fatigue** — home station to RSA at Mt Carmel and HAAP. Multi-vehicle convoys; front-end and back-end daily driving.	H	Dawn-to-dusk + RON-at-home per CG policy (narrow carve-out at Mt Carmel for 1 RGT OPFOR / TNARNG per JFHQ-TN FRAGORD 3) · daylight-only driving; **no vehicles enter HAAP premises** · convoy plans briefed to CDR NLT 30 APR; pre-trip inspections · 2-driver rule for >4 hr one-way legs · max 12 hr combined duty-plus-drive per day · Soldiers with home station >2 hr one-way from ICP authorized to self-fund Mt Carmel-area hotel	BN CDRs brief convoy plans to RGT CDR NLT 30 APR. HHC tracks RON locations. (**BN CDRs / HHC**)	L

4	**SECFOR perimeter outdoor duty** — area security, TCPs, dismounted patrols in variable weather. Heat / cold, hydration, exhaustion.	M	**TNSG is unarmed by default; no Soldiers carry weapons** (removes weapon-handling / use-of-force risk) · **physical patrol footprint limited to outside perimeter fence, parallel to southernmost side of US 11W only** (per HAAP POC 20 APR); interior N/S/W patrols and screens are notional only · battle-buddy system; 2-on / 4-off rotation target · **heat-injury prevention IAW TB MED 507 / FM 7-22** — published 14 MAY forecast WBGT and work/rest cycle (see Heat Risk supplement below); WBGT measured and posted at the ICP every hour by Safety Officer; rotation adjusted by Heat Category · hydration logged; water cap **1¼ qt/hr hard / 1½ qt/hr moderate** to prevent hyponatremia · dawn-to-dusk cap · ROE briefed as presence / verbal / call LE (see JAG Pre-Brief)	3 BN CDR executes as SECFOR TF CDR. NCOICs enforce battle-buddy and hydration logs. **Safety Officer measures and posts hourly WBGT / Heat Category at ICP and triggers work/rest adjustments per the Heat Risk supplement.** HAAP LNO ensures physical-footprint compliance. (**3 BN CDR / NCOIC / Safety Officer / HAAP LNO**)	L
5	**sUAS operations** — airspace conflicts, equipment failure, battery fire, FAA / TDOT / TCA compliance.	M	FAA Part 107 certified pilot required (3 certified: CPT Widner, 1LT Riley, LT Hoskins) · airspace check with Tri-Cities TRACON if within Class D/E · LiPo battery storage per SOP; emergency landing zones pre-identified · TCA § 39-13-609 compliance verified with JAG · **NO-GO Line at HAAP perimeter is absolute** — no sUAS crosses it (per HAAP POC) · sUAS mission is drone-detection-test only; **no imagery retained inside fence**	4 BN provides Air Ops Branch and Part 107 pilots. JAG reviews UAS policy. S6 coordinates TRACON comms. (**Air Ops Branch Chief / 4 BN UAS / JAG / S6**)	L
6	**Communications blackout inject** (14-15 MAY) — scenario degrades comms; real-world safety calls must still get through.	M	PACE plan published (SOI NLT 30 APR) · safety exception: **medical / 911 traffic never suppressed** · BN rally points and pre-planned ATAK positions; runners identified · HF / VHF backup tested pre-mission · all Soldiers carry **personal mobile devices as independent real-world fallback** (blackout is a training inject, not an actual cellular outage)	S6 publishes PACE. BN S6s ensure radio checks pre-mission. Safety Officer tracks safety-traffic exception. (**S6 / BN S6s / Safety Officer**)	L
7	**Civilian interaction / ROE ambiguity** — SECFOR near public road access; potential civilian contact at TCPs and perimeter.	H	ROE written against TN state law (SAD authority), not Army doctrine · JAG consultation with **COL Williams (PMO)** per DIV OPORD §3.i.6.(h) · unarmed / presence-only posture; escalation to site OIC and local LE · TNSG personnel briefed on ROE; written card issued	S3 routes ROE to JAG for review. RGT CO accepts final ROE. BN CDRs brief to Soldiers before execution. (**S3 / JAG / RGT CO / BN CDRs**)	M
8	**Title 10 / SAD command authority seam** — HD-framed exercise with TNNG Title 10 lead; TNSG is SAD only. *Risk of TNSG personnel practicing de facto subordination to federal command.*	H	JAG consultation required before execution (see JAG Pre-Brief) · command relationships documented and briefed · TNSG personnel briefed on training-fiction nature of federal C2 links · TNSG LNO at JOC per CG enabling task	S3 routes documentation to JAG. RGT CO briefs command and participating Soldiers. LNO at JOC clarifies authority at hand-off points. (**S3 / JAG / RGT CO**)	M
9	**TCA § 39-13-609 drone privacy constraints** — TN law restricts certain aerial surveillance by government entities.	M	JAG review before any UAS mission plan is finalized · avoid collection over private property without TDOT / landowner clearance · retention / dissemination rules documented; no federal sharing without written authorization · sUAS tests HAAP drone detection system only; **no imagery retained**	JAG reviews UAS plan. 4 BN UAS pilot executes IAW reviewed plan. S6 / S3 verify no retention / sharing outside plan. (**JAG / 4 BN UAS / S3**)	L

10	**Medical readiness** — MRC-2 (role-limited), MRC-3 (controlled-environment, single-day), MRC-4 / unknown (treated as MRC-3 per BG Cox 1 MAY 26). *Current organic 30 PAX: 13 MRC-1 / 8 MRC-2 / 3 MRC-3 / 4 MRC-4 / 2 MRC-unknown.* See Block 4 for **individual** deployment plan per SM.	H	**MRC-2:** ICP-interior / staff roles only; no extended SECFOR field duty; battle buddy; medical sick-call at ICP within 30 min — see Block 4 individual entries · **MRC-3:** controlled-environment, single-day participation 14 MAY only, individual plan per SM (see Block 4); BG Cox written concurrence required · **MRC-4 → defaults to MRC-3 treatment** per BG Cox 1 MAY 26 guidance (PHA-non-compliance = no verified medical baseline = controlled environment only); individual plan per SM (see Block 4); BG Cox concurrence required · **MRC-unknown → defaults to MRC-3 treatment** under same logic · 61st MED BN will NOT provide PHAs on-site per DIV OPORD §4.c.(4); pre-mission PHA currency a separate workstream · dawn-to-dusk / RON-at-home applies to all participants	S1 verifies MRC and PHA status. **BG Cox concurs on every MRC-3 / MRC-4 / unknown deployment plan in Block 4 — individual review per SM.** RGT CO approves MRC-2 roles. BN CDRs enforce battle-buddy assignments and role limits. (**S1 / BG Cox / RGT CO / BN CDRs**)	L

Heat Risk Supplement (Hazard #4 — published per BG Cox 1 MAY 26 review)

Forecast (published H-13; refresh H-72 and daily). Kingsport TN / HAAP region for 14 MAY 26 (highest-activity day). Based on Wx Channel / NWS climatology and current outlook: high temp **78–82 °F**, dewpoint 60–65 °F, RH 55–70%. Projected **WBGT 78–83 °F → Heat Category 1–2 (White / Green flag)**. NWS hourly forecast for Kingsport (ZIP 37660) re-pulled at H-72 and posted at the ICP daily; 14 MAY forecast re-evaluated each morning of execution.

Day-of measurement. Kestrel 5400 (or equivalent WBGT meter) operated by the Safety Officer; if no meter is available on-site, NWS hourly Heat Index for Kingsport (ZIP 37660) substitutes. Readings logged at **0700, 0900, 1100, 1300, 1500, 1700R**. Safety Officer posts current Heat Category and current work/rest cycle on the ICP whiteboard each hour.

Work / Rest Cycle and Water Intake (TB MED 507 Table 3-2; FM 7-22 App C):

WBGT (°F)	Heat Cat	Flag	Easy Work	Moderate Work	Hard Work	Water (qt/hr)
78.0 – 81.9	1	White	NL / NL	NL / NL	40 / 20 min	½ – ¾
82.0 – 84.9	2	Green	NL	50 / 10 min	30 / 30 min	¾ – 1
85.0 – 87.9	3	Yellow	NL	40 / 20 min	30 / 30 min	¾ – 1
88.0 – 89.9	4	Red	NL	30 / 30 min	20 / 40 min	¾ – 1
≥ 90.0	5	Black	50 / 10 min	20 / 40 min	10 / 50 min	1 (max)

NL = no work-rest limit at that activity level. **Water cap: 1¼ qt/hr (hard work) or 1½ qt/hr (moderate) — never exceed**, to prevent hyponatremia.

Activity classifications for TNMAN 26.

- *Easy work:* ICP-interior staff tasks, seated radio operations, command-post duties, sUAS pilot operating from ICP launch station.
- *Moderate work:* Standing TCP, walking patrol on flat paved / improved ground, dismounted screen, perimeter visual reconnaissance.
- *Hard work:* Sustained dismounted patrol off-road or under load. *Not anticipated for this exercise* given perimeter-only and unarmed posture.

Action thresholds.

- **Heat Cat 3 (Yellow, 85–87.9 °F WBGT):** S3 + Safety Officer notified; rotate to 40/20 min for moderate outdoor work; reinforce hydration logging; pre-position medical at ICP.
- **Heat Cat 4 (Red, 88–89.9 °F WBGT):** Suspend strenuous outdoor activity; rotate SECFOR to ICP-interior shifts where feasible; medical standby alerted; brief CDR.
- **Heat Cat 5 (Black, ≥ 90 °F WBGT):** Stop all outdoor activity except emergency response; pull SECFOR off perimeter to ICP; brief CDR for go/no-go on continued execution.

Implementer: Safety Officer (primary). 3 BN CDR (SECFOR TF CDR) executes the rotation. NCOICs maintain hydration logs and call-overs. CDR holds suspend / no-go authority.

† Hazard-#10 counts in the form previously reflected the pre-30 APR roster. Current organic roster is **30 PAX** — see Roster and Block 4 below for current named personnel detail. **MRC summary (current):** 13 MRC-1 / 8 MRC-2 / 3 MRC-3 / 4 MRC-4 / 2 MRC-unknown. Per BG Cox 1 MAY 26 guidance, the **9 SMs in the MRC-3 / MRC-4 / unknown bands are all treated as MRC-3 for deployment purposes** — controlled environments only, individual plan per SM, BG Cox concurrence per SM.

Block 4 — Medical Readiness Individual Deployment Plan

Default posture (per DIV medical policy, TNSG SOP, **as adjusted by BG Cox 1 MAY 26 guidance**):

- **MRC-1** — fully available; deploys without restriction.
- **MRC-2** — partial duty; deploys with role limitation; RGT CO approves; individual mitigation per SM (table below).
- **MRC-3** — limited duty; **highest category of risk on the form** per BG Cox; deploys only to **controlled environments** (ICP-interior, single-day, MRC-1/2 battle buddy, scheduled medical check-ins); **individual plan per SM**; BG Cox written concurrence required.
- **MRC-4** — PHA-non-compliant / no verified medical baseline. **Defaults to MRC-3 treatment per BG Cox 1 MAY 26 guidance** ("MRC 4s are unknown as they did not comply with a PHA event, most likely will only be approved as MRC 3"). Same controlled-environment posture; individual plan per SM; BG Cox concurrence required.
- **MRC-unknown** — MRC field blank in the most recent roster; treated identically to MRC-4 until verified.

Deploying any MRC-3, MRC-4, or MRC-unknown Soldier requires written concurrence from **BG Cox (DCG-O / 61st MED BN CO)** per the individual plans below. Each plan is reviewed on its own merits — no generic boilerplate.

Specific medical limitations behind each MRC-3 categorization are not in 3 RGT's hand. The plans below set the controlled environment (the operational mitigation 3 RGT executes); BG Cox / 61st MED BN review the underlying medical specifics as part of concurrence and may further restrict.

MRC-2 Personnel (Role-Limited Deployment — Authorized at RGT CO level)

Rank	Name	Unit	Role	MRC-2 Justification	Mitigation
COL	Roark, Robert R	HHC	RGT CO	Regimental commander; command presence required at ICP	ICP-interior C2 only; no SECFOR field tasks; medical standby at ICP
LTC	Sheaf, John T	HHC	S3	Primary mission planner; operational continuity depends on S3 presence	ICP-interior TOC only; driver/VC assigned for movement; seated workstation
CSM	Seals, Michael L	HHC	RCSM	Senior enlisted representative; policy and discipline enforcement	ICP-interior; limited walking circulation; no SECFOR line duty
CSM	Rutherford, Michael J	HHC	S6 NCO	Regiment's only current S6 SME (per 2 APR LTC Smith email); comms plan execution	ICP-interior S6 position; radio/data station; no field tasks
1LT	Fielitz-Scarbrough, Cheryl A	HHC	S1 Officer	S1 is the primary source of personnel tracking; indispensable at ICP	ICP-interior S1 station; seated desk work; driver assigned
CPT	Borrilez, Michael S	2 BN	BN CO	Battalion commander; C2 of 2 BN element	ICP-interior BN TOC position; limited walking; medical standby
SSG	Lillard, Randall B	2 BN	Comm NCO	Skill match — primary 2 BN comms NCO	ICP-interior radio station; battle buddy; no patrol duty

SGT	Spence, Troy G	2 BN	Info Tech	Skill match — primary 2 BN IT support	ICP-interior workstation; seated duty
SFC	Sturgill, DeWayne D	3 BN	S3 Ops NCO	Primary 3 BN S3 operations NCO; C2 continuity	ICP-interior BN TOC; battle buddy; limited outdoor exposure
CPT	Haddix, Terrence S	4 BN	BN CMDR	Battalion commander; C2 of 4 BN element	ICP-interior BN TOC; driver assigned; medical standby

MRC-3 Personnel — Individual Deployment Plans (BG Cox concurrence required)

Common controls applied to all entries below: single-day participation 14 MAY 26 only; controlled-environment ICP-interior duty; named battle buddy of MRC-1 or MRC-2 status, co-located; medical check-ins at arrival, midday, and departure with the 61st MED Co attached medic; dawn-to-dusk; RON at home (no overnight at ICP); medevac plan briefed and in effect.

Rank	Name	Unit	Role	Operational Reason for Inclusion	Specific Limitations & Risks	Individual Controlled-Environment Plan	Battle Buddy	Day-of Medical
MAJ	Crosby, Lyle A	3 BN	BN CO	3 BN is Focus of Main Effort per OPORD; battalion command continuity essential	Specific MRC-3 medical limitations: **pending BG Cox / 61st MED BN review.** Operational risk: prolonged outdoor exposure, extended walking, sustained physical exertion.	Single-day 14 MAY only. ICP-interior 3 BN TOC, **seated workstation**; no walking circulation outside the ICP, no SECFOR field tasks, no perimeter visits. Briefings come to him at TOC.	1LT Aaron Overton (MRC-1, ASST S3, co-located at HHC TOC, ~10 ft from 3 BN TOC seat).	Arrival 0800R · 1200R · departure 1700R, with attached medic. Vitals logged.
SGT	Malone, Tony W	3 BN	A Co MP	MP team leader; experienced NCO	Specific MRC-3 medical limitations: **pending BG Cox / 61st MED BN review.** Operational risk: patrol rotation, perimeter circulation, sustained outdoor exposure.	**Substitute strongly recommended** — PFC Nicholas Human (MRC-1, A Co MP) or PV2 Charles Elrod (MRC-1, B Co MP) can lead the A Co MP team. If retained at LTC Sheaf's call: single-day 14 MAY only; **ICP-interior MP records / roster duty only**, no patrol rotation, no perimeter circulation, no field movement.	If retained: SFC DeWayne Sturgill (MRC-2, 3 BN S3 Ops NCO, co-located at 3 BN TOC).	Arrival, midday, departure with attached medic.
SSG	Miles, Matthew E	4 BN	MP Squad Leader	4 BN's senior MP NCO; SECFOR planning skill-match	Specific MRC-3 medical limitations: **pending BG Cox / 61st MED BN review.** Operational risk: line SECFOR duty, patrol rotation, sustained outdoor exposure under load.	**Role restriction strongly recommended** — replace line-SECFOR with MRC-1 SSG John Whalen (4 BN A Co 1SG Acting). If retained at LTC Sheaf's call: single-day 14 MAY only; **SECFOR planning cell at ICP-interior only**, no line SECFOR duty, no patrol rotation, no perimeter circulation.	SSG John Whalen (MRC-1, 4 BN, co-located at 4 BN SECFOR planning cell).	Arrival, midday, departure with attached medic.

MRC-4 Personnel — Treated as MRC-3 (per BG Cox 1 MAY 26 guidance)

Per BG Cox: *"MRC 4s are unknown as they did not comply with a PHA event, most likely will only be approved as MRC 3."* Individual plans below place each SM in a controlled environment identical in structure to the MRC-3 plans above. **Common controls** (same as MRC-3 section): single-day 14 MAY 26, ICP-interior, named battle buddy MRC-1/2 co-located, medical check-ins at arrival / midday / departure, dawn-to-dusk, RON at home, medevac plan in effect.

Rank	Name	Unit	Role	Operational Reason for Inclusion	Specific Limitations & Risks	Individual Controlled-Environment Plan	Battle Buddy	Day-of Medical

CPT	McCroskey, Travis D	HHC	ASST JAG	Sole organic JAG presence post-23 APR; on-site JAG continuity for ROE / TCA queries	MRC-4 (PHA non-compliant); no verified medical baseline. Operational risk: sustained outdoor exposure, perimeter circulation.	Single-day 14 MAY only. ICP-interior HHC JAG / staff seat only; **no field tasks, no perimeter visits**. JAG queries routed to him at the ICP seat.	LTC John Sheaf (MRC-2, S3, co-located HHC TOC) or 1LT Aaron Overton (MRC-1, ASST S3, co-located).	Arrival, midday, departure.
MAJ	Bennett, Richard A	4 BN	Chaplain	Sole 4 BN chaplain; chaplain presence doctrinally required during exercises	MRC-4 (PHA non-compliant); no verified medical baseline. Operational risk: walking circulation across BN areas.	Single-day 14 MAY only. ICP-interior 4 BN chaplain office; **no field circulation without battle buddy**; pastoral visits within ICP-interior only; chaplain duty does not require physical exertion.	CPT Terrence Haddix (MRC-2, 4 BN BN CMDR, co-located 4 BN TOC).	Arrival, midday, departure.
2LT	Neisler, Mark S	4 BN	BN S4	Battalion S4 (logistics / supply) — required for 4 BN sustainment functions on game day	MRC-4 (PHA non-compliant); no verified medical baseline. Operational risk: outdoor logistics inspection, supply staging movement.	Single-day 14 MAY only. ICP-interior 4 BN TOC S4 station; **no field circulation, no supply-yard inspection**; logistics coordination by radio / phone from ICP seat.	CPT Matthew Widner (MRC-1, 4 BN BN XO, co-located 4 BN TOC).	Arrival, midday, departure.
WO1	Hendon, Shaleigh D	4 BN	BN S1 NCO	Battalion S1 (personnel) — accountability and reporting on game day	MRC-4 (PHA non-compliant); no verified medical baseline. Operational risk: walking circulation for personnel accountability.	Single-day 14 MAY only. ICP-interior 4 BN S1 station, **seated**; personnel accountability worked from roster + radio, not physical roll-call rotations.	CPT Matthew Widner (MRC-1, 4 BN BN XO) or SSG John Whalen (MRC-1, 4 BN A Co 1SG Acting), co-located at 4 BN TOC.	Arrival, midday, departure.

MRC-Unknown Personnel — Treated as MRC-3 (per BG Cox 1 MAY 26 guidance, applied by extension)

These two SMs have a blank MRC field on LTC Sheaf's 29 APR roster (no verified medical baseline). Treatment defaults to MRC-3 under the same logic BG Cox applied to MRC-4. Individual plans below.

Rank	Name	Unit	Role	Operational Reason for Inclusion	Specific Limitations & Risks	Individual Controlled-Environment Plan	Battle Buddy	Day-of Medical
1LT	Riley, Michael W	3 BN	BN XO · FAA Part 107 UAS Pilot	One of two organic Part 107 UAS pilots after LT Hoskins removal; sUAS lane execution depends on pilot pool	MRC-unknown; no verified medical baseline. Operational risk: outdoor exposure during pilot operations; pilot duty itself is largely seated at the launch/control station.	Single-day 14 MAY only. **sUAS pilot duty operated from the ICP-adjacent launch/control station** (covered, seated, hydration on hand); when not flying, ICP-interior 3 BN TOC; **no perimeter patrol, no field circulation away from launch station**.	SFC Joshua Ferguson (treated MRC-3, 3 BN HQ Co 1SG, co-located at 3 BN TOC) — paired together if both retained.	Arrival, midday, departure.
SFC	Ferguson, Joshua	3 BN	HQ Co 1SG	3 BN HQ Co 1SG; Top accountability and ground-truth NCO for 3 BN on game day	MRC-unknown; no verified medical baseline. Operational risk: walking circulation across 3 BN AO.	Single-day 14 MAY only. ICP-interior 3 BN TOC 1SG duty, **seated**; accountability by roster + radio, not physical roll-call rotations; **no perimeter circulation**.	1LT Michael Riley (treated MRC-3) or SFC DeWayne Sturgill (MRC-2, 3 BN S3 Ops NCO), co-located at 3 BN TOC.	Arrival, midday, departure.

Already-Removed (historical, no longer on roster)

- *1LT Christopher W Barnes (2 BN, Chaplain) — struck from roster 23 APR 26 (LTC Sheaf strikethrough on Mission Roster workbook). Was MRC-3 in the original 1 MAY 26 v1 submission; no longer attending. Not in current Block 4.*
- *SSG Burns (2 BN) — discharged 11 APR 26 per CPT Borrilez.*
- *Other 23 APR strikethroughs (CPT Moore, SGT Walker, CPT McCroskey at the time, PV1 Gauthier) — most subsequently restored or remained out per LTC Sheaf 29 APR. CPT McCroskey is back in HHC and is in the MRC-4 table above.*

Block 5 — Overall Residual Risk

Overall Residual Risk: MODERATE

Rationale: Residual rating is driven by **Hazard 7 (ROE)** and **Hazard 8 (Title 10 / SAD seam)**, both pending JAG consultation with **COL Williams (PMO)**. All other operational and medical lines are at LOW residual with controls applied. **Approval authority per AR 385-10:** mission commander (COL Robert Roark, RGT CO). Medical-readiness deployment-plan concurrence required separately from BG Alan Cox, DCG-O / 61st MED BN CO, **per individual SM** in Block 4 (no aggregate concurrence — every MRC-3 / MRC-4 / unknown plan stands or falls on its own).

With all controls applied, every operational hazard line now sits at Low residual:

1. **HAAP interior hazards (#2)** — excluded by the perimeter-only + ICP-outside-perimeter constraint.
2. **Severe weather (#1)** — 3 RGT is authorized to call off participation entirely if forecast conditions warrant; "don't go" is a valid control for a training exercise with no real-world response requirement.
3. **Convoy ops (#3)** — dawn-to-dusk daylight driving only; no vehicles enter HAAP premises; 2-driver rule, 12-hr combined duty/drive cap, authorized self-funded hotels for long commutes.
4. **SECFOR outdoor duty (#4)** — **TNSG is unarmed by default and no Soldiers will carry weapons**, removing weapon-handling accidents and use-of-force concerns. **Heat-injury controls now publish a forecast WBGT and work/rest cycle per TB MED 507** with hourly day-of WBGT measurement and a documented action ladder (Cat 3 reduce, Cat 4 suspend strenuous, Cat 5 stop) — see Heat Risk supplement above Block 4.
5. **Comms blackout inject (#6)** — PACE plan + personal mobile devices as an independent real-world fallback; the blackout is a training inject, not a real outage.
6. **Medical readiness (#10)** — **individual controlled-environment plans per SM** (see Block 4). Per BG Cox 1 MAY 26 guidance, every MRC-3 / MRC-4 / unknown SM has a single-day 14 MAY plan with ICP-interior controlled environment, named MRC-1/2 battle buddy co-located, and scheduled medical check-ins. Each plan is reviewed by BG Cox on its individual merits — no boilerplate. Plans recommending substitution (Malone, Miles) explicitly flag the alternative MRC-1 SM available so 3 RGT can release the at-risk SM at LTC Sheaf's call without losing operational coverage.

Remaining Moderate residuals that drive the aggregate rating:

- **#7 Civilian interaction / ROE clarity** at perimeter TCPs (pending JAG-written ROE)
- **#8 Title 10 / SAD command authority seam** (pending JAG consultation and documented command relationships)

Reassessment triggers — any of the following would force a re-rating before execution:

- Weather forecasts at H-72 push #1 residual above Moderate
- JAG consultation does not conclude before execution (#8 would climb)
- A mitigation in place on paper cannot be enforced in practice (e.g., inability to provide a dedicated MRC-1 battle buddy for each MRC-3 Soldier, or an MRC-3 Soldier who cannot be held to a single-day schedule)
- Status of an MRC-4 Soldier changes between form signature and execution

Notes (matches submission form)

1. **TNSG is unarmed by default**; no Soldiers carry weapons for this mission.
2. **Perimeter-only constraint** — no TNSG personnel enter HAAP premises; ICP is outside the perimeter.
3. Per **DoD Site POC Mr. Tony Armstrong** (20 APR call): SECFOR physical footprint is limited to outside the perimeter fence, parallel to the southernmost side of US 11W only; interior N/S/W patrols and screens are notional only (tabletop); OPFOR non-confrontational, main gate only.
4. **CG dawn-to-dusk / RON-at-home policy** applies to TNSG personnel. JFHQ-TN FRAGORD 3 authorizes 278th ACR to provide 50-PAX RON space at Mt Carmel Armory 11-17 MAY, primarily for 1 RGT OPFOR and TNARNG Security / COMMS personnel — **not a TNSG-wide RON authorization**.
5. **Medical readiness summary (current organic 30 PAX):** 13 MRC-1 (full duty) · 8 MRC-2 (role-limited, RGT CO approved — see Block 4 MRC-2 table) · 3 MRC-3 + 4 MRC-4 + 2 MRC-unknown = **9 SMs in controlled-environment / single-day plans** per Block 4, each individually reviewed by BG Cox. **MRC-4 and MRC-unknown default to MRC-3 treatment per BG Cox 1 MAY 26 guidance** (no verified medical baseline → controlled environment only).
6. The signed version will be submitted on the **official DD 2977 form**; this workbook captures the narrative content and formatting in the DIV-preferred layout used successfully for the 3 RGT UAS Section / Funnel Fury 2026 submission (approved without edits).

Block 6 — Risk Acceptance / Signatures

> *"I have reviewed the risk assessment for the above mission/task. I accept the residual risk of MODERATE on behalf of the command, and concur with the individual medical-readiness deployment plans in Block 4 (separate per-SM concurrence from BG Cox required for every MRC-3 / MRC-4 / MRC-unknown plan)."*

Required signatures (in routing order):

#	Role	Name	Rank	Responsibility	Signature / Date
1	Preparer	Overton, Aaron L III	1LT	Accuracy of hazard identification and mitigation plan; v2 incorporates BG Cox 1 MAY 26 feedback (Hazard #4 heat risk publication; Block 4 individual plans per SM)	**Signed 1 May 2026 (v2)**
2	S3 / Operations	Sheaf, John T	LTC	Mission concept and operational controls; concurs the individual Block 4 plans are operationally executable	*pending*
3	DCG-O / 61st MED BN CO	Cox, Alan L	BG	**Per-SM concurrence on every MRC-3 / MRC-4 / MRC-unknown deployment plan in Block 4** (9 SMs total). May further restrict any plan based on the underlying medical specifics; substitution recommendations (Malone, Miles) and "do-not-deploy" outcomes are explicitly available.	*pending*
4	RGT CO	Roark, Robert R	COL	**Final approval** — Moderate residual risk is approved at the mission commander level. Acceptance of the risk and authority to execute the mission as scoped.	*pending*

Distribution: 3 RGT CO, 3 RGT S3, DCG-O, 61st MED BN, DIV G3, Safety Officer, all BN CDRs, S1.

Outstanding Items Before Routing

- **BG Cox individual concurrence** — 9 SMs (3 MRC-3 + 4 MRC-4 + 2 unknown) each have an individual deployment plan in Block 4. BG Cox concurrence is sought **per SM**, not in aggregate. Plans flagging substitution (SGT Malone, SSG Miles) leave LTC Sheaf the option to release the at-risk SM and run the

alternative MRC-1 SM listed.

- **PHA currency** — DIV medical policy requires current PHA; this data is not in hand. Chase via S1 medical records. (Note: PHA non-compliance is the basis for MRC-4 status; resolution is a parallel medical workstream that informs but does not block the BG Cox concurrence on the controlled-environment plans.)
- **WBGT meter at the ICP** — Heat Risk supplement assumes a Kestrel 5400 (or equivalent) is on hand. If 3 RGT does not source one before 13 MAY, the Safety Officer falls back to NWS hourly Heat Index for ZIP 37660 (already in the supplement as a documented substitute). LTC Hughes (G6) may have one — query.
- **JAG consultation** — see JAG Pre-Brief. Must be completed before the form is routed so JAG-confirmed ROE language can be cited in Control O-7 / L-1. **No organic JAG** on the mission until 1 MAY 26 — CPT McCroskey is now back in HHC per LTC Sheaf's 29 APR roster. Consultation primary still routes to **COL Williams (PMO)** per the DIV OPORD; CPT McCroskey provides on-site JAG presence as a layer beneath that.
- **Title 10 / SAD seam** — documented command relationships need to be attached as an addendum; currently described in the JAG pre-brief only.
- **MRC-2 role limitations** must be briefed to and acknowledged by each MRC-2 Soldier before execution, per TNSG medical readiness policy.
